

THE OPPORTUNITY

Our experienced development team specialises in creating and supporting custom systems for clients. For this role, these tend to be web applications built using Java EE and Oracle.

Occasionally, we are also required to develop, integrate or support with .Net/MS SQL applications and support systems for clients.

You will be responsible for the delivery of these applications. This includes, but is not limited to: providing technical solutions to end-users, analysis and design, development, configuration, testing, documentation, deployment and on-going monitoring and support.

The role might involve some UK travel and occasional work outside standard hours. Whilst we pride ourselves in having a relaxed working environment, occasionally project deadlines and urgent support issues will require you to be able keep a cool head under pressure.

ARE YOU:

- Experienced at all stages of an application's life cycle?
- A good problem solver; able to think outside the box?
- Able to adopt established processes and methodologies to comply with in-house development standards?
- Able to manage your own time across multiple tasks?
- Aware of existing and emerging technologies in order to determine the right tool for the job?
- Experienced in a customer-facing role; able to work alongside technical and non-technical customers alike?

CO-OPERATIVE WEB

We are a different kind of company, one with an ethical view of the world. We are a workers' co-operative, owned and run by the people who work here and care passionately about our clients, our impact and our community.
